

Steveston Interchange Project

Ground Improvement & Bridge Foundation Work

February 2025

Work to remove the existing Steveston Highway Overpass is nearing completion, and ground improvement and pile driving activities are getting underway as we enter Phase 2 of the Project.

Starting the week of February 17 and lasting for approximately three months, crews will begin stone column installation and pile driving work in the southwest and southeast quadrants of the Project.

The activities will both increase ground stability and create a strong foundation for the Phase 2 overpass. Ground improvements are common for construction Projects in Richmond due to ground conditions in the area.

Stone column and piling work is expected to generate noise and vibrations, which will sound like mechanical hammering. To minimize disruptions, the work is limited to daytime hours.

The overpass sidewalk will remain unaffected, and no impacts are expected for the Highway 99 bus stop.

Drivers are reminded that while Phase 2 of the Steveston Interchange Project is under construction, the northbound loop ramp will be closed with a two-lane left turn signal onto the northside ramp detour in place.

See Page 2 for more details.
